

New Zealand wetsalted calfskins

The calf season in New Zealand is very short and production is going from from July to October. The calf skins are available either as "freezer" from industrial slaughterhouses or as "casualty", (equarissage) from animals that died on the field
The drumsalted skins are drained for 48 hours and then weighed.

Wetsalted "freezer" calf skins

Available weight ranges and selections per skin, trimmed, unfleshed:

| | |
|---------|--------------------------------|
| Light: | under 1.5 kg (90/10 I/II) |
